

- Course Description:** BSI's "Implementing an Occupational Health and Safety Management System" course helps participants gain a better understanding of the "best practices" for occupational health and safety (OH&S). To provide students with the appropriate background, the course covers the basics of an occupational health and safety management system (OHSMS), the process approach, and management system documentation. The course also explains the applicability of OHSAS 18002:2000 and how this document can assist with the development of an OHSMS. The course will present many of the theories, practices, and knowledge for the implementation and operation of an OHSMS.
- Learning Objectives:**
- Understand the terminology of occupational health and safety management systems
 - Explore the intent and interpretation of the individual clauses of BS OHSAS 18001:2007
 - Identify hazards and risks
 - Understand the implementation stages
 - Understand required documentation and records
 - Learn best practice implementation techniques
 - Identify and plan for required resources to implement an OHSMS
- Course Materials:** **Students receive comprehensive course manuals with reference materials.**
- Who Should Attend:**
- Health and safety managers
 - Management
 - Consultants
 - Environmental or quality managers interested in implementing an OHSMS
 - Individuals recently tasked with implementing an OHSMS
- Duration:** **Course times:**
- Day 1: 8:00 am – 5:30 pm
 - Day 2: 8:00 am – 5:30 pm
- Prerequisite:** Participants should have a basic understanding of BS OHSAS 18001:2007, ISO 14001:2004, or occupational health and safety management systems.
- Course Logistics:** Certificates of attendance are provided at the conclusion of the course.
- Student : Instructor Ratio – 20:1
